A flexible object merging framework Jonathan P. Munson, Prasun Dewan

October 1994 Proceedings of the 1994 ACM conference on Computer supported cooperative work

Publisher: ACM Press

Additional Information: full citation, abstract, references, citings, index Full text available: pdf(1,40 MB) terms

The need to merge different versions of an object to a common state arises in collaborative computing due to several reasons including optimistic concurrency control, asynchronous coupling, and absence of access control. We have developed a flexible object merging framework that allows definition of the merge policy based on the

particular application and the context of the collaborative activity. It performs automatic, semi-automatic, and interactive merges, supports semantics-determined m ...

5 Version models for software configuration management

Reidar Conradi, Bernhard Westfechtel

June 1998 ACM Computing Surveys (CSUR), Volume 30 Issue 2

**Publisher: ACM Press** 

Full text available: pdf(483.54 KB)

Additional Information: full citation, abstract, references, citings, index

After more than 20 years of research and practice in software configuration management (SCM), constructing consistent configurations of versioned software products still remains a challenge. This article focuses on the version models underlying both commercial systems and research prototypes. It provides an overview and classification of different versioning paradigms and defines and relates fundamental concepts such as revisions, variants, configurations, and changes. In particular, we foc ...

June 1997 ACM SIGMOD Record, Proceedings of the 1997 ACM SIGMOD international conference on Management of data, Volume 26 Issue 2

Publisher: ACM Press, ACM Press

Full text available: pdf(648.00 KB)

Additional Information: full citation, abstract, references, citings, index terms

Structural matching and discovery in documents such as SGML and HTML is important for data warehousing [6], version management [7, 11], hypertext authoring, digital libraries [4] and Internet databases. As an example, a user of the World Wide Web may be interested in knowing changes in an HTML document [2, 5, 10]. Such changes can be detected by comparing the old and new version of the document (referred to as structural matching of documents). As another example, in hypertext authoring, a ...

<sup>8</sup> Fine-grained revision control for collaborative software development

Boris Magnusson, Ulf Asklund, Sten Minör

December 1993 ACM SIGSOFT Software Engineering Notes, Proceedings of the 1st ACM SIGSOFT symposium on Foundations of software engineering,

Volume 18 Issue 5 **Publisher:** ACM Press, ACM Press

Full text available: pdf(1.06 MB)

Additional Information: full citation, abstract, references, citings, index terms

This paper presents a framework for controlling the evolution of complex software systems concurrently developed by teams of software engineers. A general technique for fine-grained revision control of hierarchically structured information, such as programs and documents, is described and evaluated. All levels in the hierarchy are revision controlled, leaves as well as branch nodes. The technique supports sharing of unchanged nodes among revisions, automatic change propagation, and change-orient ...

10 New directions/applications: Integrated text and image understanding for document understanding

Suzanne Liebowitz Taylor, Deborah A. Dahl, Mark Lipshutz, Carl Weir, Lewis M. Norton, Roslyn Nilson, Marcia Linebarger

March 1994 Proceedings of the workshop on Human Language Technology HLT '94

Publisher: Association for Computational Linguistics

Full text available: pdf(680.24 KB) Additional Information: full citation, abstract, references

Because of the complexity of documents and the variety of applications which must be supported, document understanding requires the integration of image understanding with text understanding. Our document understanding technology is implemented in a system called IDUS (Intelligent Document Understanding System), which creates the data for a text retrieval application and the automatic generation of hypertext links. This paper summarizes the areas of research during IDUS development where we have ...

There is a simple method for integrating information retrieval and hypertext. This consists of treating nodes as isolated documents and retrieving them in order of similarity. If the nodes are structured, in particular, if sets of nodes collectively constitute documents, we can do better. This paper shows how the formation of the hypertext, the retrieval of nodes in response to content based queries, and the presentation of the nodes can be achieved in a way that exploits the knowledge enco ...

terms, review

The number, size, and user population of bibliographic and full-text document databases are rapidly growing. With a high document arrival rate, it becomes essential for users of such databases to have access to the very latest documents; yet the high document arrival rate also makes it difficult for users to keep themselves updated. It is desirable to allow users to submit profiles, i.e., queries that are constantly evaluated, so that they will be automatically informed of new additions tha ...

13 An algebra for structured office documents

Ralf Hartmut Güting, Roberto Zicari, David M. Choy

April 1989 ACM Transactions on Information Systems (TOIS), Volume 7 Issue 2

Publisher: ACM Press

Full text available: pdf(2.57 MB)

Additional Information: full citation, abstract, references, citings, index terms, review

We describe a data model for structured office information objects, which we generically call "documents," and a practically useful algebraic language for the retrieval and manipulation of such objects. Documents are viewed as hierarchical structures; their layout (presentation) aspect is to be treated separately. The syntax and semantics of the language are defined precisely in terms of the formal model, an extended relational algebra. The proposed approach has sever ...

Volume 17 Issue 5

Publisher: ACM Press, ACM Press

Full text available: pdf(1.15 MB)

Additional Information: full citation, abstract, references, citings, index terms

Existing approaches for merging the results of parallel development activities are limited. These approaches can be characterised as state-based: only the initial and final states are considered. This paper introduces operation-based merging, which uses the operations that were performed during development. In many cases operation-based merging has advantages over state-based merging, because it automatically respects the data-type invariants of the objects, is extensible for arbitrary obje ...

Augusto Celentano, Maria Grazia Fugini, Silvano Pozzi

July 1995 ACM Transactions on Information Systems (TOIS), Volume 13 Issue 3

Publisher: ACM Press

Full text available: pdf(2.14 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms, review

In the office environment, the retrieval of documents is performed using the concepts contained in the documents, information about the procedural context where the documents are used, and information about the regulations and laws that discipline the life of documents within a given application domain. To fulfill the requirements of such a sophisticated retrieval, we propose a document retrieval model and system based on the representation of knowledge describing the semantic contents of d ...

20 Efficient passage ranking for document databases

Marcin Kaszkiel, Justin Zobel, Ron Sacks-Davis

October 1999 ACM Transactions on Information Systems (TOIS), Volume 17 Issue 4

Publisher: ACM Press

Full text available: pdf(328.98 KB)

Additional Information: full citation, abstract, references, citings, index

Queries to text collections are resolved by ranking the documents in the collection and returning the highest-scoring documents to the user. An alternative retrieval method is to rank passages, that is, short fragments of documents, a strategy that can improve effectiveness and identify relevant material in documents that are too large for users to consider as a whole. However, ranking of passages can considerably increase retrieval costs. In this article we explore alternative query evalua ...

MINOS is an object-oriented multimedia information system that provides integrated facilities for creating and managing complex multimedia objects. In this paper the model for multimedia documents supported by MINOS and its implementation is described. Described in particular are functions provided in MINOS that exploit the capabilities of a modern workstation equipped with image and voice input-output devices to accomplish an active multimedia document presentation and browsing within docu ...

9 Toward a logical/physical theory of spreadsheet modeling

Tomás Isakowitz, Shimon Schocken, Henry C. Lucas

January 1995 ACM Transactions on Information Systems (TOIS), Volume 13 Issue 1

Publisher: ACM Press

Full text available: pdf(2.76 MB)

Additional Information: full citation, abstract, references, citings, index terms, review

In spite of the increasing sophistication and power of commercial spreadsheet packages, we still lack a formal theory or a methodology to support the construction and maintenance of spreadsheet models. Using a dual logical/physical perspective, we identify four principal components that characterize any spread sheet model: schema, data, editorial, and binding. We present a factoring algorithm for identifying and extracting these components ...

12 Designing theory-based systems: a case study

**Publisher: ACM Press** 

Full text available: pdf(1.19 MB)

Additional Information: full citation, abstract, references, index terms

In this paper, we discuss principles for designing and testing computer systems intended to support users' thinking as they perform open-ended or ill-defined tasks. We argue that such systems inherently and inevitably implement a model of users' cognitive behaviors. Making that model explicit can provide system developers with guidance in taking design decisions. However, both model and system must be tested and refined. We discuss these principles in relation to a case study in which our g ...

13 The effect of data structures on the logical complexity of programs

March 1987 Communications of the ACM, Volume 30 Issue 3

Publisher: ACM Press

Full text available: pdf(887.66 KB) Additional Information: full citation, abstract, references, index terms

The logical complexity of a program is a measure of the effort required to understand it. We hypothesize that the logical complexity of a program increases with the increase in the opaqueness of the relationship between the physical data structures used in the program and their corresponding abstract data types. The results of an experiment conducted to investigate this hypothesis are reported. Documentation techniques for making programs easier to understand using complex data structures a ...

14 <u>Domain analysis and framework-based software development</u>

👞 Andrea Valerio, Giancarlo Succi, Massimo Fenaroli

September 1997 ACM SIGAPP Applied Computing Review, Volume 5 Issue 2

Publisher: ACM Press

Full text available: pdf(993.99 KB) Additional Information: full citation, abstract, index terms

Domain Analysis is the process that identifies the relevant objects of an application domain. The goal of Domain Analysis is Software Reuse. The higher is the level of the lifecycle object to reuse, the larger are the benefits coming from its reuse, the harder is the definition of a workable process. Frameworks are excellent candidates for Domain Analysis: they are at a higher level than code but average programmers can understand them. This paper presents the main features of Sherlock, a domain ...

<sup>16</sup> An interaction engine for rich hypertexts

Kasper Østerbye, Kurt Nørmark

September 1994 Proceedings of the 1994 ACM European conference on Hypermedia technology

Publisher: ACM Press

Full text available: pdf(1.04 MB)

Additional Information: full citation, abstract, references, citings, index

#### terms

In semantically rich hypertexts it is attractive to enable presentation of a network of nodes and link at different levels of abstraction. It is also important that the user can interact with the hypertext using a command repertoire that reflects the chosen abstraction level. Based on a characterization of rich hypertext we introduce the concept of an interaction engine that governs the separation between internal hypertext representation and external screen presentation. This separation is ...

### 17 Passive capture and structuring of lectures

Sugata Mukhopadhyay, Brian Smith

October 1999 Proceedings of the seventh ACM international conference on Multimedia (Part 1)

Publisher: ACM Press

Full text available: pdf(2.15 MB)

Additional Information: full citation, abstract, references, citings, index terms

Despite recent advances in authoring systems and tools, creating multimedia presentations remains a labor-intensive process. This paper describes a system for automatically constructing structured multimedia documents from live presentations. The automatically produced documents contain synchronized and edited audio, video, images, and text. Two essential problems, synchronization of captured data and automatic editing, are identified and solved.

Keywords: audio/video capture, educational technology, matching

### 18 Complexity of sequential ATPG

T. E. Marchok, A. El-Maleh, W. Maly, J. Rajski

March 1995 Proceedings of the 1995 European conference on Design and Test

**Publisher: IEEE Computer Society** 

Full text available: pdf(1.20 MB) Additional Information: full citation, abstract, citings

The research reported in this paper was conducted to identify those attributes, of both sequential circuits and structural, sequential automatic test pattern generation (ATPG) algorithms, which can lead to extremely high test generation times. The retiming transformation is used as a mechanism to create two classes of circuits which present varying degrees of complexity for test generation. It was observed for three different sequential test generators that the increase in complexity of testing ...
